## Comparing Two Means

### Single Sample T-Test

A single sample t-test was conducted to determine if the mean scores of the sample data was significantly different from the population mean. The test revealed,  $M = 115.857$ ,  $SD = 57.488$ ,  $t(34) = 3.690$ ,  $p = 0.001$ ,  $d = 0.624$ , that the sample mean was significantly different from the population mean.

**Table 1**

	M	SD	df	t	p	d
t	115.86	57.49	34.00	3.69	0.00	0.62
